

# Chris Marquez

U.S. Citizen | New York City Metropolitan Area | [chrismarquez.dev](https://chrismarquez.dev) | [LinkedIn](#) | [GitHub](#)

## EDUCATION

### Villanova University

*Bachelor of Science in Computer Science, Minor in Cybersecurity*

- **GPA:** 3.75 / 4.00; **Honors:** Dean's List (6 Semesters)

Villanova, PA

*Expected May 2026*

## EXPERIENCE

### Software Engineering Intern

*ClassLink*

Remote

*June 2025 - August 2025*

- Engineered a distributed, networked data-ingestion system on client/server architecture to process and synchronize roster data for 5M+ users via ClassLink APIs and AWS (Lambda, DynamoDB, Secrets Manager), enabling scalable partner integrations
- Implemented OAuth2/OIDC SSO authentication to enable secure logins for 10+ partner applications, reducing integration setup time by 50% and standardizing authentication flows across AWS infrastructure with industry-standard best practices
- Authored 5+ pages of API reference documentation and setup guides, adopted by 5+ partner teams to improve data-driven integration accuracy, reduce support requests, and enable scalable partner onboarding for future partner integrations

### Computer Science Peer Tutor

*Villanova University*

Villanova, PA

*January 2025 - Present*

- Instructed 100+ undergraduate students per semester across multiple CS courses through 200+ total sessions, improving grasp in problem-solving and algorithmic thinking using Python and Java, contributing to stronger academic performance
- Conducted instruction across 5+ CS courses including data structures, discrete structures, database principles, and software engineering, helping students improve assignment and exam performance by 20% through targeted, concept-driven tutoring
- Recognized for teaching excellence through a Peer Tutor of the Year nomination from a pool of 100+ peer tutors, reflecting positive feedback and mentorship across multiple CS disciplines and fostering effective collaboration across the program

### Co-Founder, Co-President

*Villanova Software Engineers*

Villanova, PA

*October 2024 - Present*

- Co-founded and lead a 20+ member student engineering organization delivering full-stack applications for startup clients, managing frontend development and coordinating cross-functional collaboration across backend, design, and client teams
- Directed an iOS MVP using Swift and SwiftUI and currently leading frontend development of a JavaScript, React, Node.js, and PostgreSQL web application, managing Agile sprints with Jira and preparing for release to 1000+ expected users
- Guided 10+ younger members through weekly code reviews and collaborative side projects, introducing best practices in Git workflow, debugging, and frontend development, improving code quality and accelerating onboarding for new developers

### Competitive Programmer

*Villanova Programming Team*

Villanova, PA

*August 2022 - Present*

- Selected to represent Villanova in the upcoming 2025 ICPC regional programming contest, solving complex algorithmic problems in Python under timed conditions and strengthening data structures and algorithmic design expertise
- Solved 300+ algorithmic challenges on LeetCode and Kattis through weekly practice sessions, strengthening competitive programming performance and advancing mastery in graph theory, dynamic programming, and complexity analysis
- Collaborated in a 3-member programming team during a competitive event at West Chester University, optimizing real-time problem-solving workflows and improving coordination, time management, and debugging efficiency in a timed environment

## PROJECTS

### Stardewdle | *React, TailwindCSS, AWS Lambda, DynamoDB, Amplify*

- Launched a full-stack Wordle-style game with 50k+ plays, architected for scalability and responsive gameplay to support 1000s of concurrent users while maintaining smooth performance and driving strong user retention across multiple platforms
- Delivered and refined real-time game logic and state synchronization to ensure consistent gameplay, maintaining 99.9% uptime and supporting 1000s of daily plays with minimal latency under high concurrent player loads through performance tuning
- Architected and optimized a scalable serverless backend using 5 AWS services (Lambda, API Gateway, DynamoDB, S3, EventBridge), enabling high availability, low latency, and automated daily puzzle generation through cloud infrastructure

### VoiceChess | *Swift, SwiftUI, SFSpeechRecognizer, AVFoundation*

- Developed an iOS application enabling hands-free chess gameplay via natural language commands, processing speech input with 98% accuracy using Apple's SwiftUI, SFSpeechRecognizer, and AVFoundation to improve accessibility and usability
- Built a custom move parser and rule enforcement engine with ChessboardKit, automating validation for all standard chess moves and eliminating 100% of invalid commands across 500+ test cases to ensure long-term reliability and consistency
- Designed a real-time speech feedback system that announces and confirms moves in under 300 ms, achieving sub-second responsiveness and delivering an accessible, touch-free gameplay experience through optimized speech-to-move processing

## TECHNICAL SKILLS & CERTIFICATIONS

**Frameworks & Languages:** JavaScript, Python, Swift, Java, React, Node.js, SwiftUI, SQL/NoSQL, REST APIs

**Cloud, Tools & Platforms:** AWS (Lambda, API Gateway, DynamoDB), GenAI, Git/GitHub, Jira, Postman, Vercel, Xcode

**Design & Supporting Technologies:** HTML, CSS3, TailwindCSS, Figma, AVFoundation, SFSpeechRecognizer, Vite

**Certifications:** AWS Certified Cloud Practitioner
