EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science, Specialization in Machine Learning

Remote

Expected 2029

Villanova University

Bachelor of Science in Computer Science

Villanova, PA

May 2026

- **GPA:** 3.75 / 4.00; **Honors:** Magna Cum Laude, Dean's List

EXPERIENCE

Software Engineering Intern

ClassLink

Remote

June 2025 - August 2025

- Reduced partner integration time by **50%** by processing **5M+** user records across **3,000+** school districts through distributed AWS data pipeline (Lambda, DynamoDB, Secrets Manager)
- Standardized secure login flows across AWS infrastructure for **10+** partner applications by implementing OAuth2/OIDC SSO authentication with industry best practices
- Decreased engineering support requests by **60%** and accelerated onboarding by enabling **5+** partner teams to integrate independently through comprehensive API documentation

Software Engineer

Villanova Institute for Research and Scholarship

Villanova, PA

January 2026 - May 2026

- Building React application for **50+** faculty researchers across **7** user interfaces by implementing Firebase authentication, PostgreSQL backend integration, and role-based access control
- Achieved **100%** session data persistence through disruptions by leveraging AI-assisted development (Claude Code) to architect fail-safe timer state management with real-time synchronization and automated daily cutoffs
- Developing **4** production features (dashboard, leaderboard, messaging, admin panel) by architecting reusable component library and state management patterns for authentication and data visualization

Co-Founder, Co-President

Villanova Software Engineers

Villanova, PA

October 2024 - May 2026

- Established engineering organization delivering full-stack applications for startup clients with **20+** members by co-founding organization, managing cross-functional teams, and establishing development workflows

PROJECTS

Stardewdle | React, TailwindCSS, AWS Lambda, API Gateway, DynamoDB, EventBridge, Amplify, Cloudflare R2

- Launched a Wordle-style daily guessing game that grew to **500k+** plays with coverage in **2** gaming outlets (PC Gamer, ScreenRant)
- Engineered a serverless AWS backend (Lambda, API Gateway, DynamoDB, EventBridge) holding **<200ms** responses under **1000+** concurrent users through asset caching and event-scoped Lambda functions
- Served all assets via Cloudflare R2 at zero egress, keeping total hosting cost at **\$0** across **500k+** plays while operating within AWS free-tier limits

CraftMate | Python, RCON Protocol, python-chess, Minecraft Server

- Built a fully playable chess game rendered inside vanilla Minecraft by connecting to a server's console through the RCON protocol, requiring no client mods or server plugins
- Enforced complete chess rules and legal move validation by integrating the python-chess library, translating board state into in-world Minecraft commands in real time
- Engineered the game loop to parse player input and synchronize board state between the chess engine and the live Minecraft world over a persistent RCON connection

RepoPilot | Python, FastAPI, React, TypeScript, ChromaDB, OpenAI Embeddings, Claude API, Docker, Pytest

- Built RAG-powered codebase Q&A tool enabling natural language search across **19** supported file types by implementing document chunking pipeline, vector embeddings with ChromaDB, and streamed LLM responses via Claude API
- Architected Python/FastAPI backend indexing repositories into optimized AST-aware code chunks in under **10 seconds** with metadata-enriched vector storage and **<3s** time-to-first-token query responses
- Implemented CI/CD pipeline with GitHub Actions running **24** Pytest integration tests across API routes, with Dockerized backend deployed on Render and React frontend on Vercel

TECHNICAL SKILLS & CERTIFICATIONS

Languages: JavaScript, TypeScript, Python, Java, SQL

Frameworks & Libraries: React, Node.js, Express, FastAPI, TailwindCSS, PostgreSQL, REST APIs

Cloud & Infrastructure: AWS (Lambda, API Gateway, DynamoDB, EventBridge), Cloudflare R2, Docker, Vercel, Render

AI & Data: RAG, LLM API Integration, OpenAI Embeddings, ChromaDB, Prompt Engineering, Claude Code, GitHub Copilot

Tools & Practices: Git, CI/CD, GitHub Actions, Pytest, OAuth2/OIDC, Agile/Scrum, Jira, Postman, HTML, CSS3

Certifications: AWS Certified Cloud Practitioner
